NAME

      wnpkgs – description of various WordNet system packages

DESCRIPTION

      WordNet 2.0 is distributed in several formats and in various packages. All of the packages are available via anonymous FTP from **ftp.cogsci.princeton.edu** and from the WordNet Web site at **http://www.cogsci.princeton.edu/~wn/**.

      Packages Available Via FTP and WWW

      The following WordNet packages can be downloaded using a web browser from **ftp://ftp.cogsci.princeton.edu/wordnet/**, or from the Web site noted above. Users can also FTP directly from **ftp.cogsci.princeton.edu**, directory **wordnet**.

Package	Filename	Platform	Description	
WordNet 2.0 Database	**WordNet-2.0.tar.gz**	Unix	WordNet 2.0 database, interfaces, sense index, interface and library source code, documentation.	
WordNet 2.0 Database	**WordNet-2.0.exe**	Windows	WordNet 2.0 database, interfaces, sense index, interface and library source code, documentation.	
Prolog Database	**WNprolog-2.0.tar.gz**	All	WordNet 2.0 database files in Prolog-readable format, documentation.	
Sense Map	**WNsnsmap-2.0.tar.gz**	All	Mapping of 1.7.1 to 2.0 senses, documentation.	

      Database Package

      The database package is a complete installation for WordNet 2.0 users. It includes the 2.0 database files, precompiled binaries for the platforms specified below, source code for the WordNet browsers and library, and documentation. The other packages are not included – they must be downloaded and installed separately.

      Note that these are the platforms that the binaries were compiled on. Most should work on newer versions of the operating system.

Operating System	Version
Sun	Solaris 8
Red Hat Linux	7.2
Windows	2000
Windows	XP
Silicon Graphics Irix	6.5.8

Prolog Database Package

The WordNet 2.0 database files are available in this package in a Prolog-readable format. Documentation describing the file format is included. This package is only downloadable in compressed tar file format, although once unpackaged it can be used from Windows systems since the files are in ASCII. Many Windows utilities, such as WinZip, can deal with compressed tar file.

Sense Map Package

To help users automatically convert 1.7.1 noun and verb senses to their corresponding 2.0 senses, we provide sense mapping information in this package. This package contains files to map polysemous and monosemous words, and documentation that describes the format of these files. As with the Prolog database, this package is only downloadable in compressed tar format, but the files are also in ASCII.

NOTES

The lexicographer files and **grind**(1WN) program are not generally distributed.

All of the packages described above may not be available at the time of release of the 2.0 database package.
